

平成21年2月27日 最終講義

# 生体内における癌のでき方

# Oval Cell

# 1968-1988

[CANCER RESEARCH34, 3379-3386 December 1974]

## Demonstration of Glucose 6-Phosphatase Activity in the Oval Cells of Rat Liver and the Significance of the Oval Cells in Azo Dye Carcinogenesis'

Katsuhiko Ogawa, Takashi Minase, and Tamenori Onoe

Department of Pathology, Sapporo Medical College, Chuo-ku, Minami 1, Nishi 17, Sapporo, Hokkaido, Japan

GGT (γ-glutamyl transpeptidase)

小野江 為則 先生

- ・ 病理学—形態学
- ・ Form／Structure  
形の背景にある原理
- ・ 方法論

Emmanuel Farber 先生

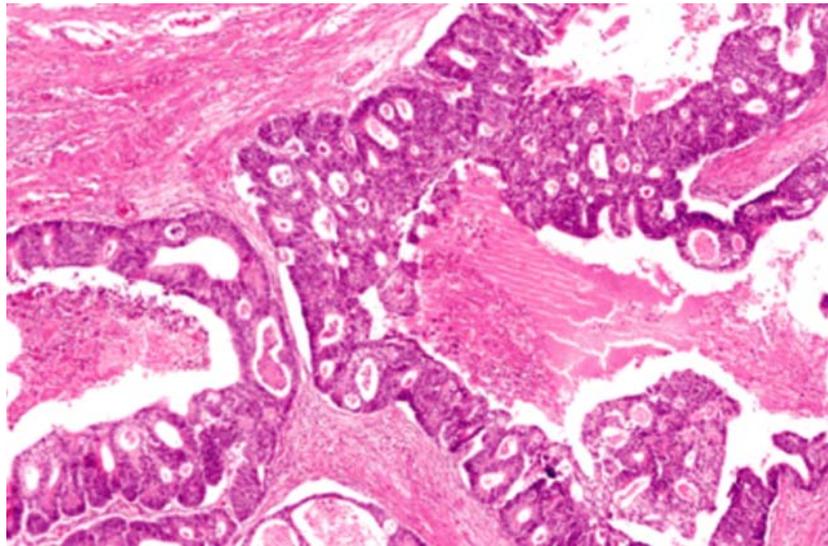

- ・ 競走馬のように  
前だけ見て進め.
- ・ 軸足を定める

# 生体内での癌のでき方

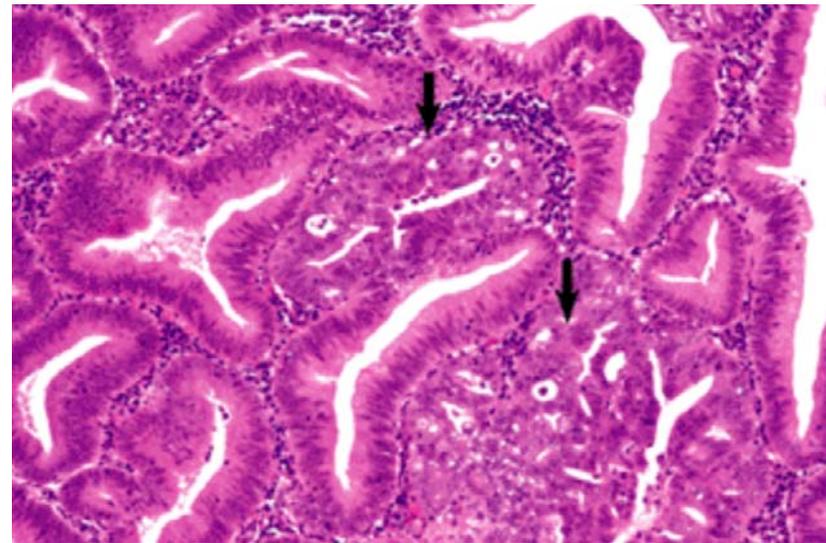

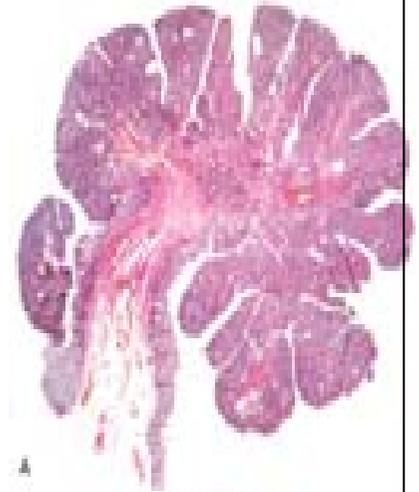

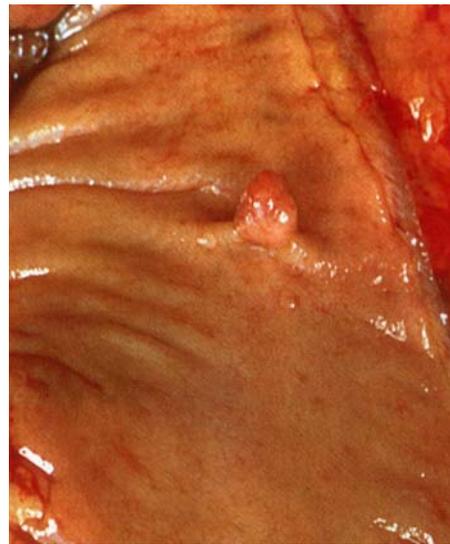

1. 癌は多段階的に発生する.
2. 癌ができるには長い年月を要する.

①多段階発癌

大腸がん

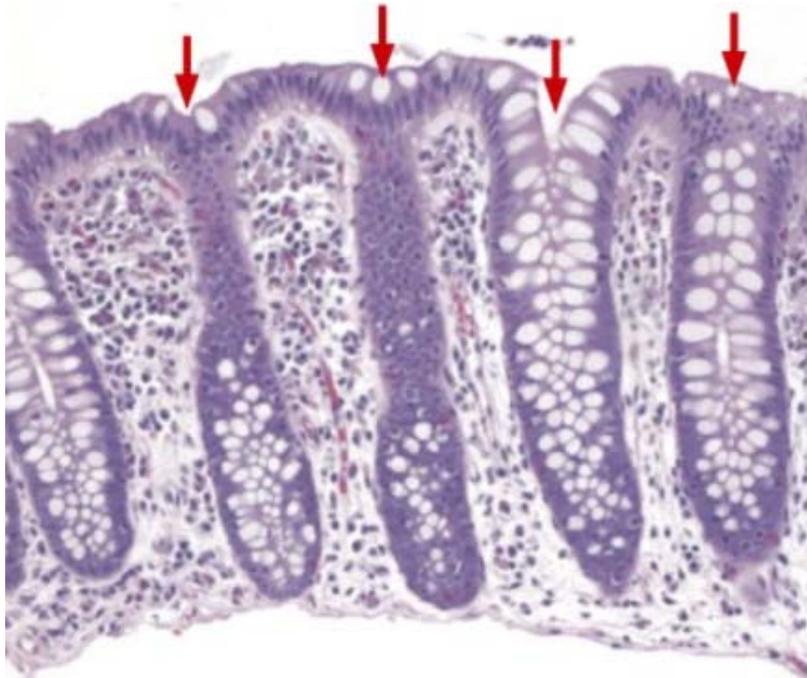

大腸ポリープ

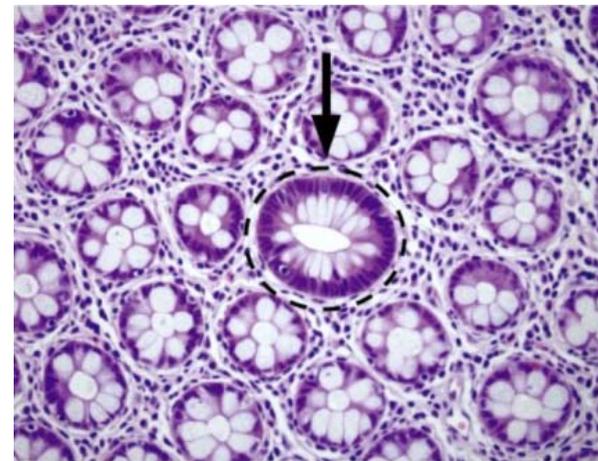

# ①多段階発癌

## 正常大腸粘膜

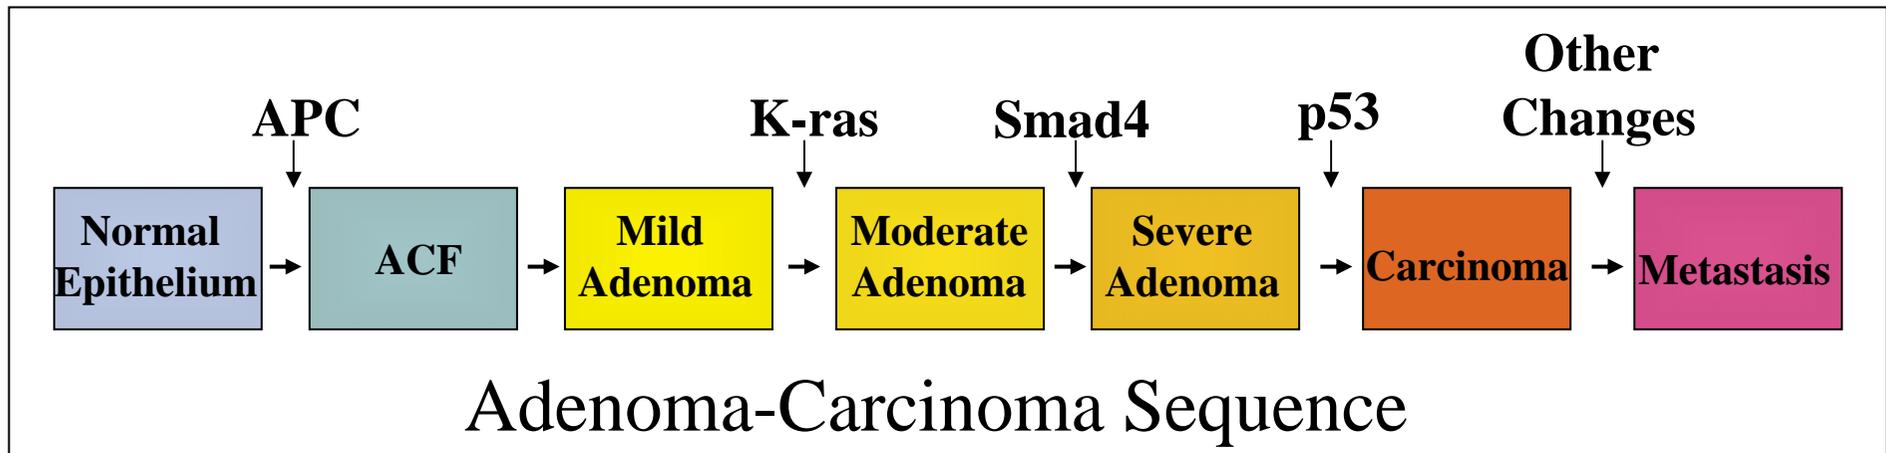

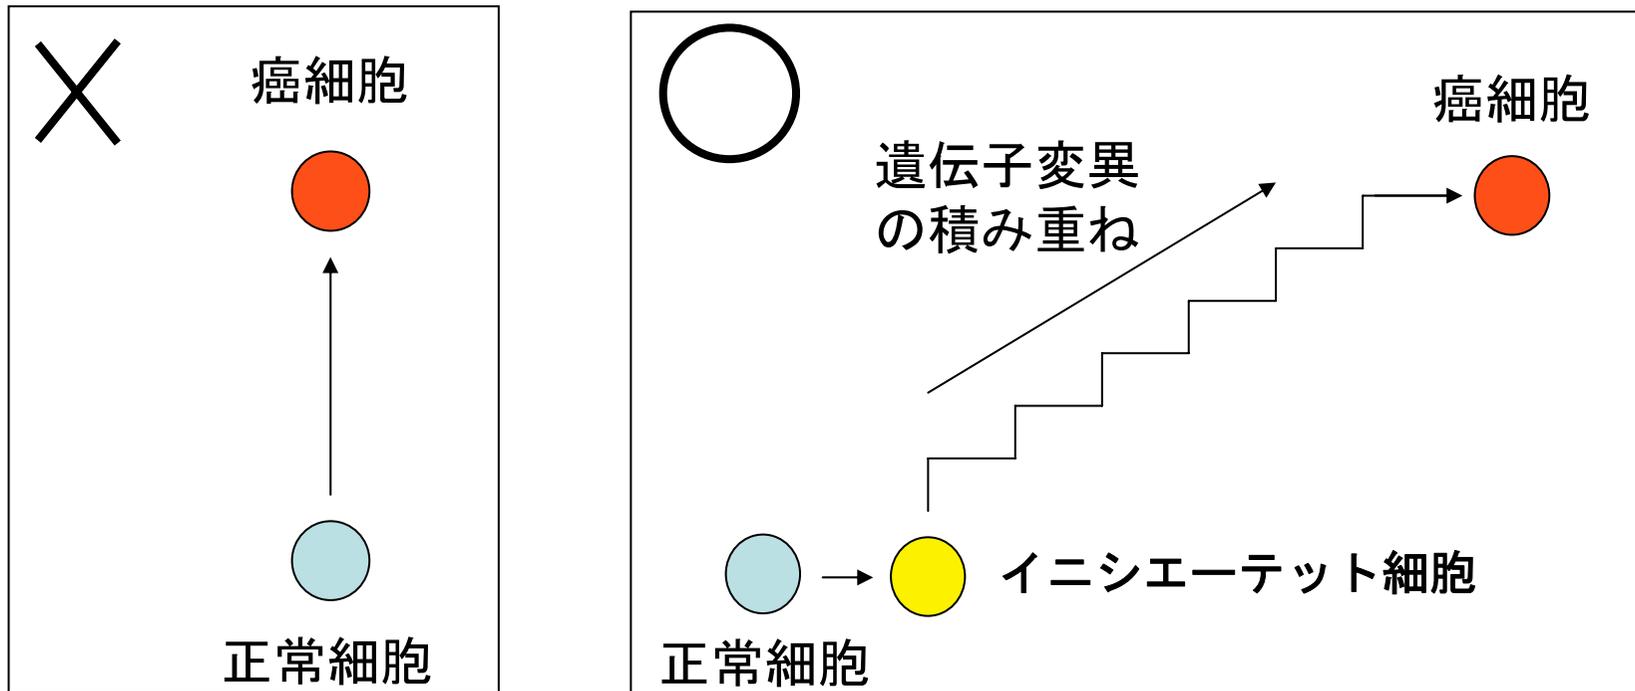

## Aberrant Cryptic Focus (ACF)

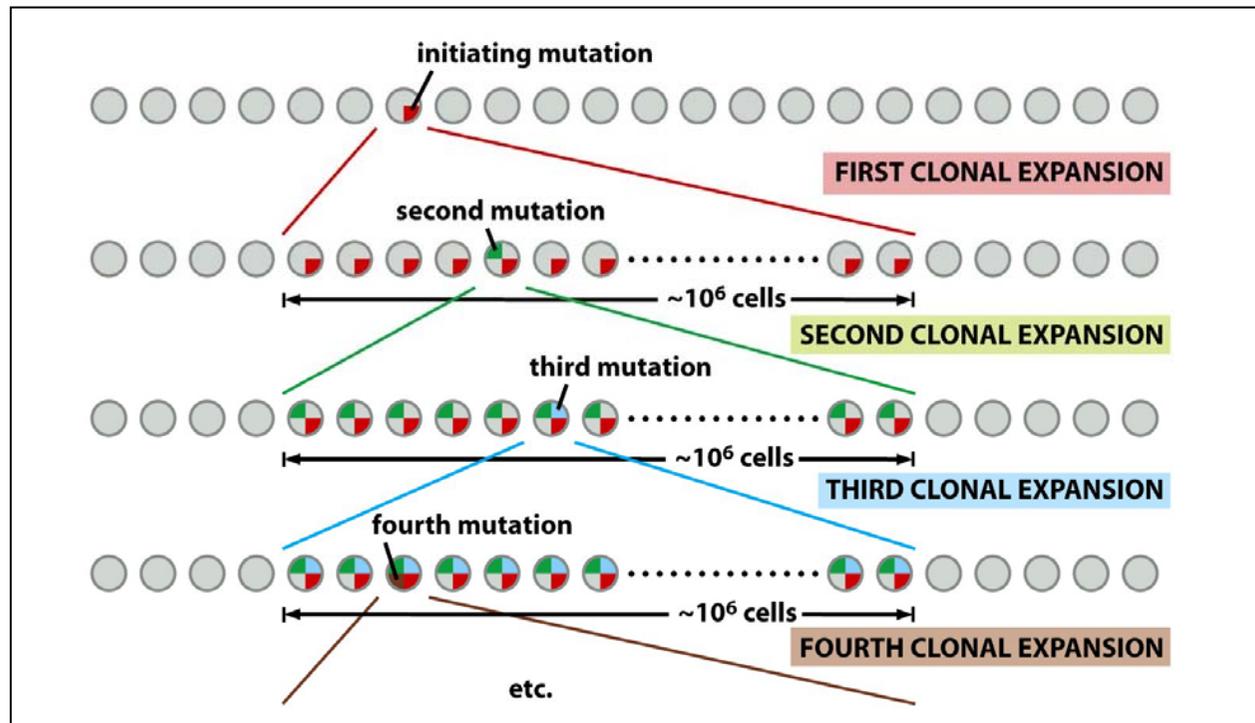

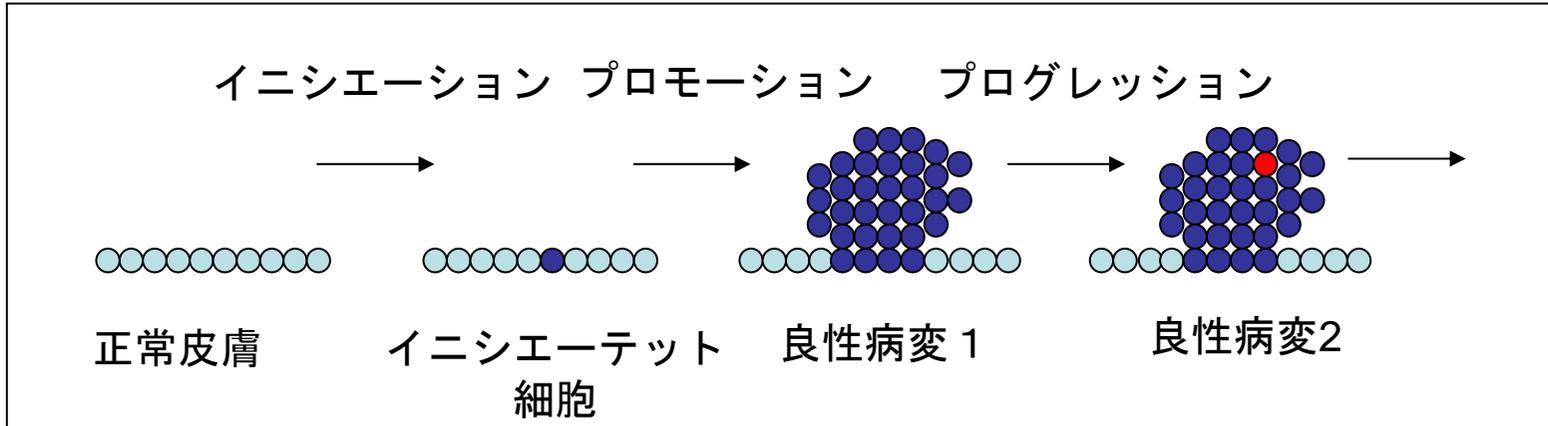

①多段階発癌

# 多段階発癌と遺伝子変異

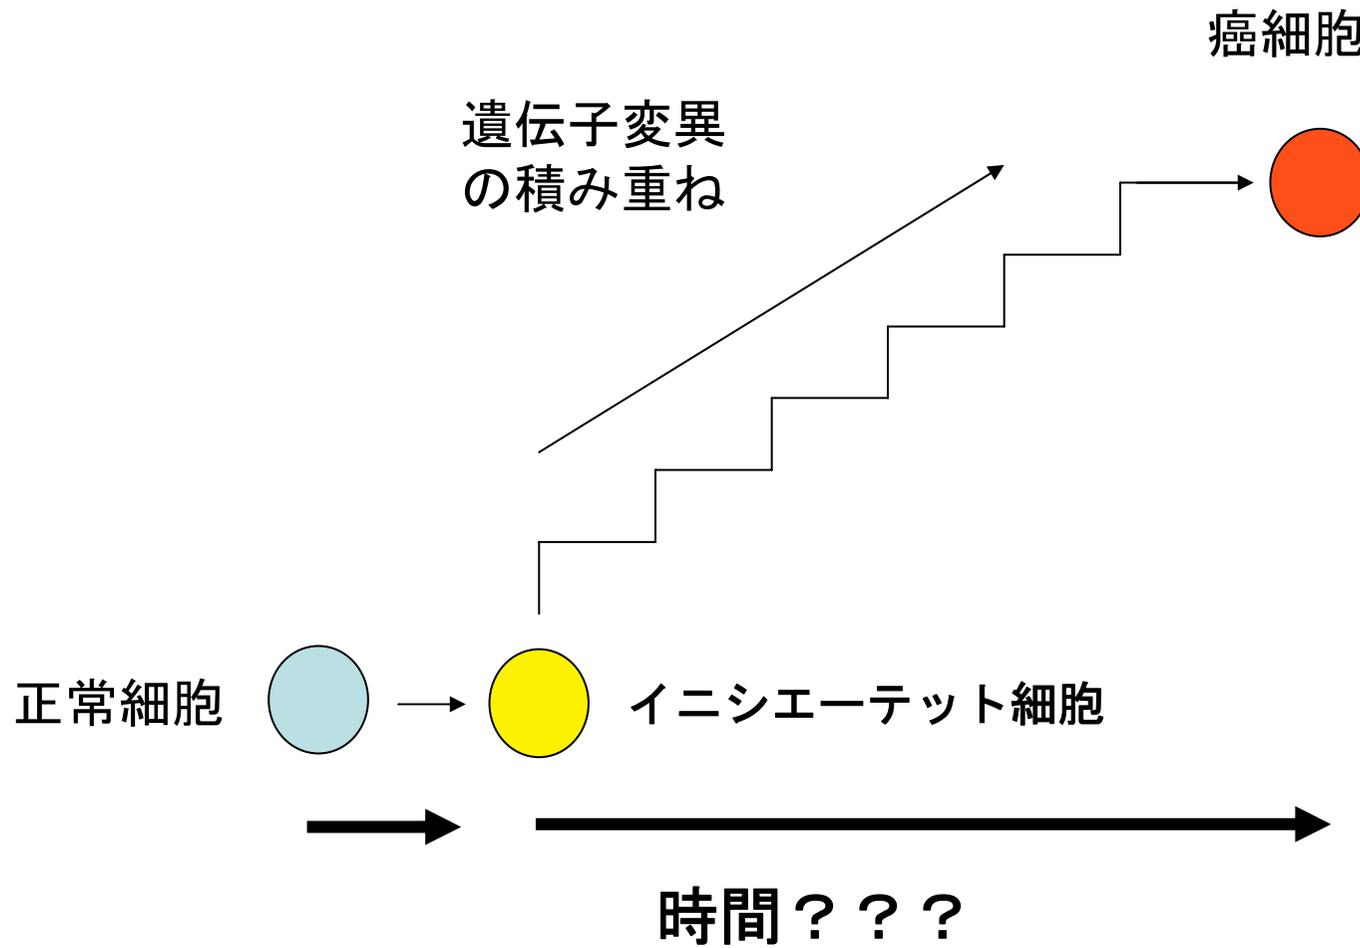

# ①多段階発癌

## 突然変異の蓄積とプロモーターの働き

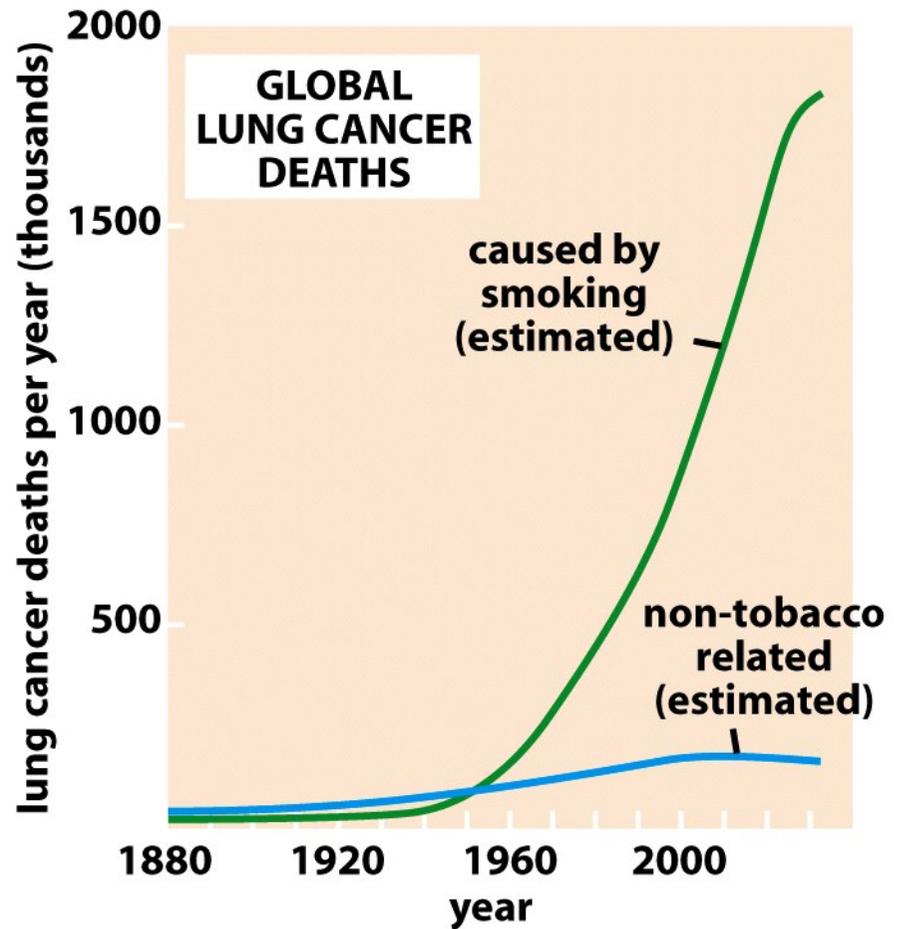

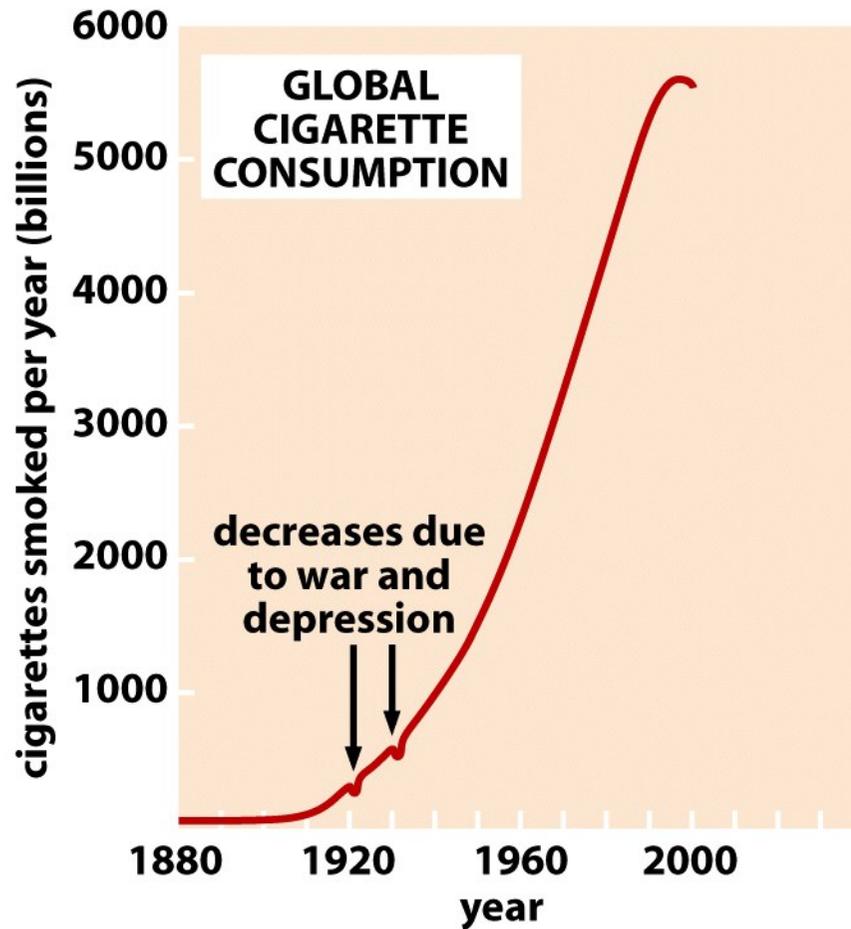

①多段階発癌

# がんはどれくらいの時間をかけて出来るのか？

## ①多段階発癌

# タバコ消費量の増加と肺がん頻度の推移

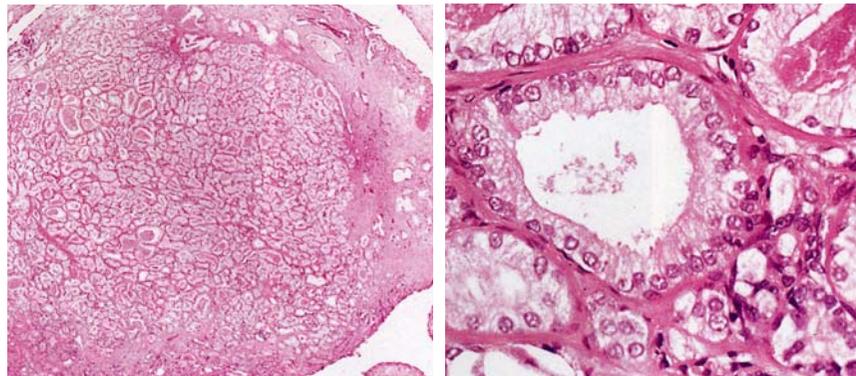

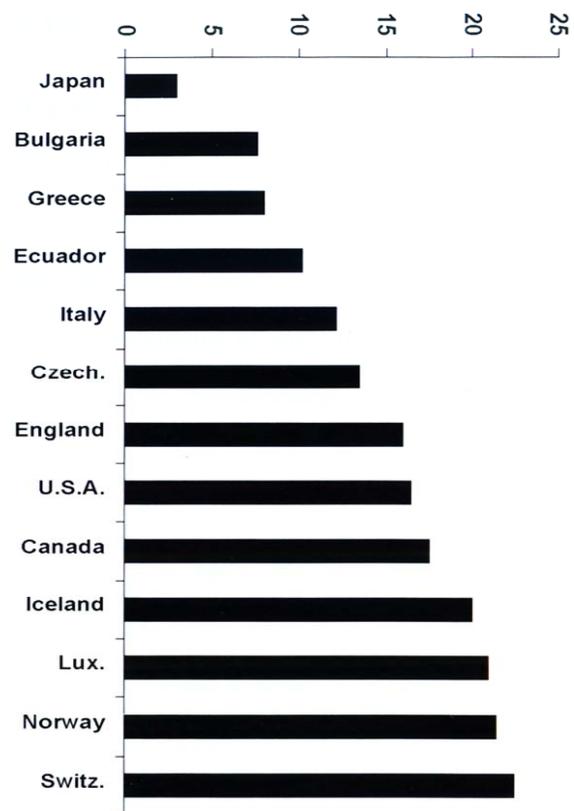

# ①多段階発癌

## 前立腺がん

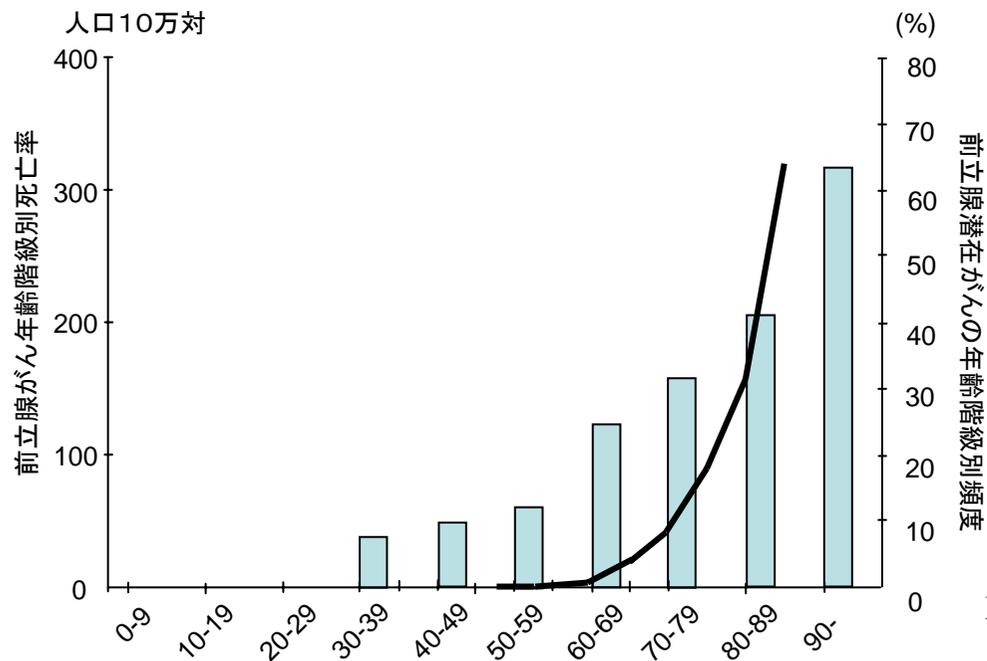

### 前立腺潜在がん

### 前立腺がんの国別頻度

Age-adjusted death rates due to prostate cancer (per 100,000 population)

### 前立腺潜在がんと前立腺がんの頻度

## ①多段階発癌

# ウイルスと発がん

◎HTLV ⇒ リンパ腫／40年

◎B型／C型肝炎ウイルス ⇒ 肝癌／20-40年

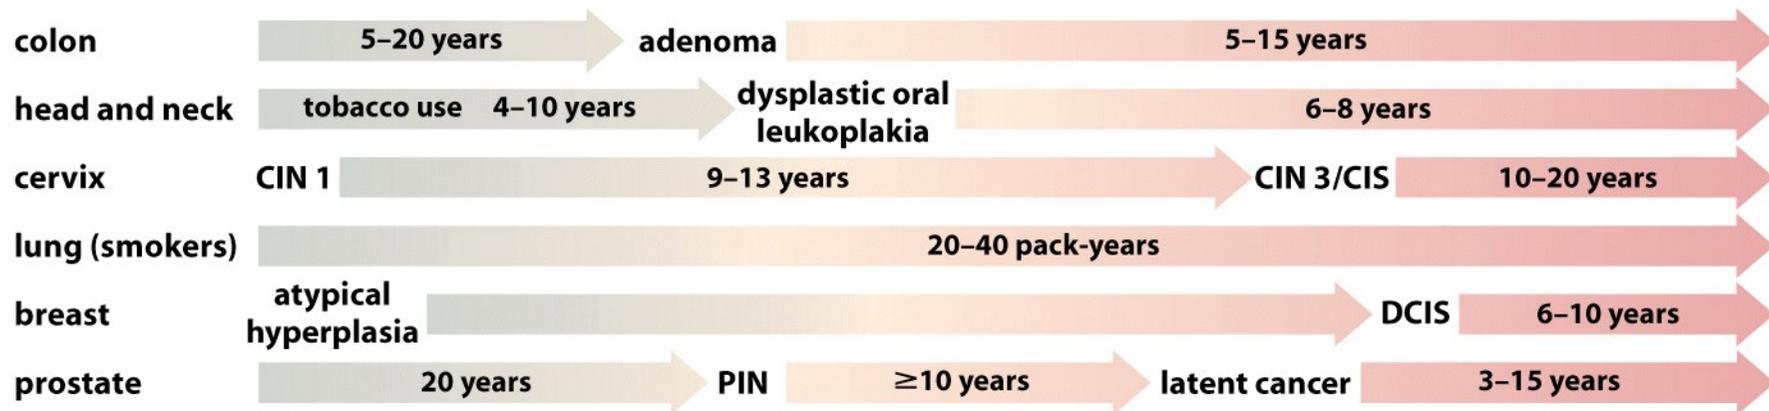

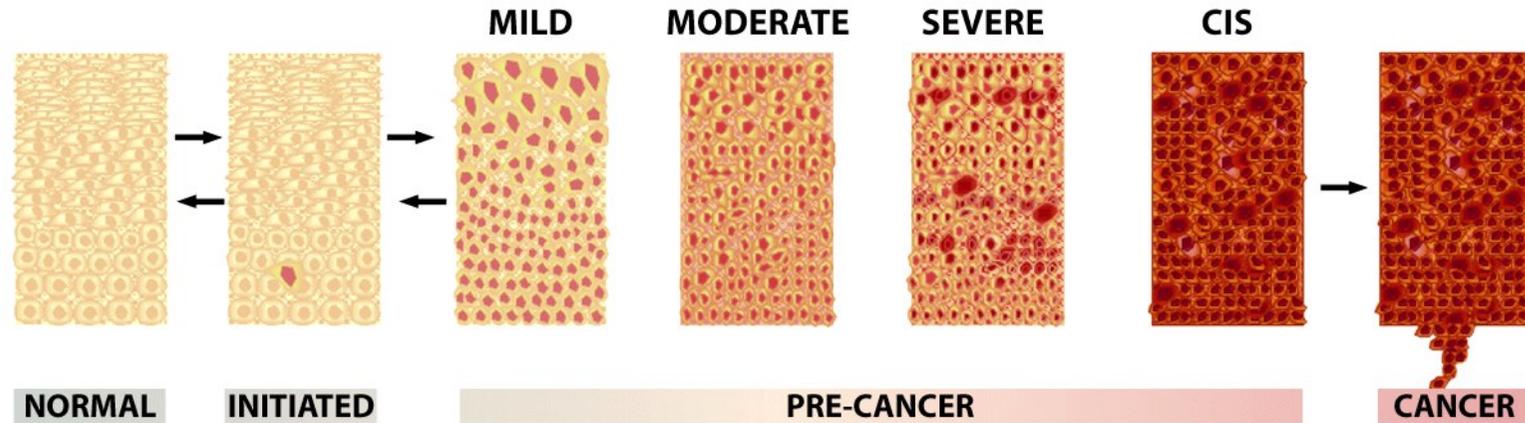

◎人パピローマウィル ⇒ 子宮頸癌／20-30年

◎EBウイルス ⇒ 鼻咽頭がん／40-50年

①多段階発癌

# ヒトの発癌に要する期間

Carcinoma in situ (CIS)

Cervical intraepithelial neoplasia (CIN)

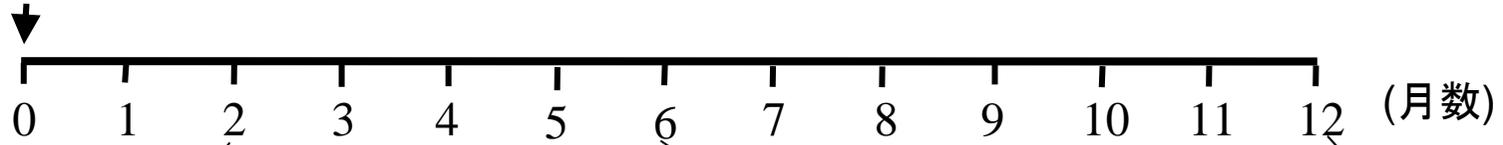

Ductal carcinoma in situ (DCIS)

Prostatic intraepithelial neoplasia (PIN)

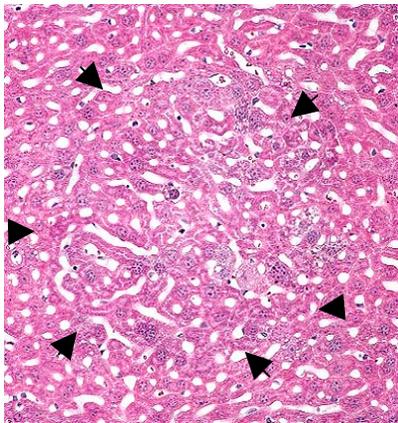

②肝発癌モデル

肝発癌モデル

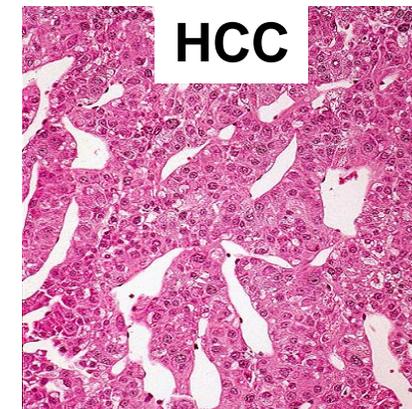

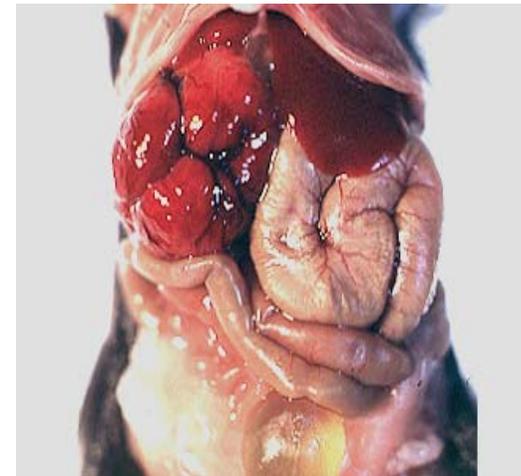

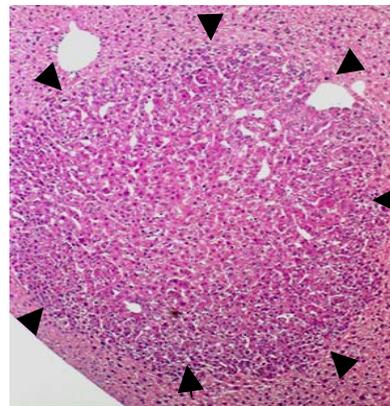

DEN B6C3F1マウス 2週令

Focus

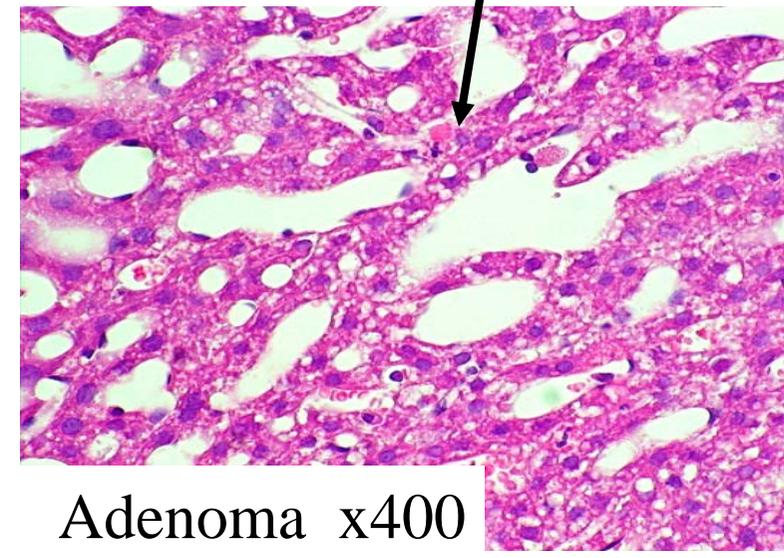

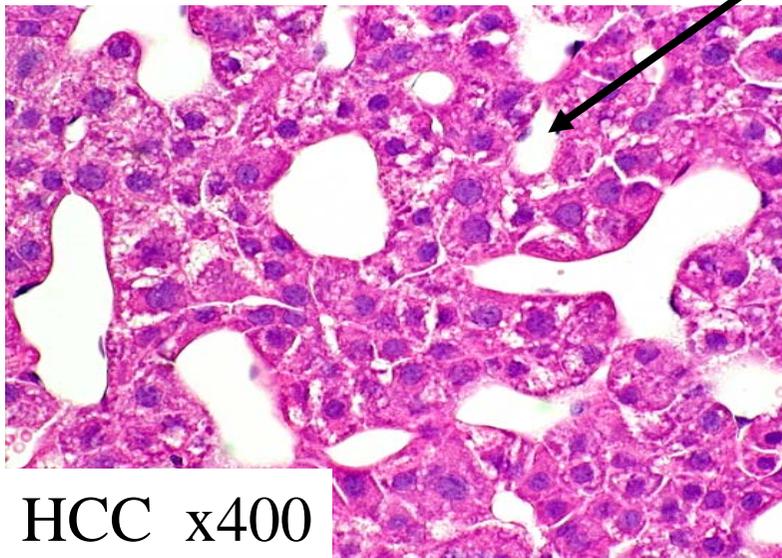

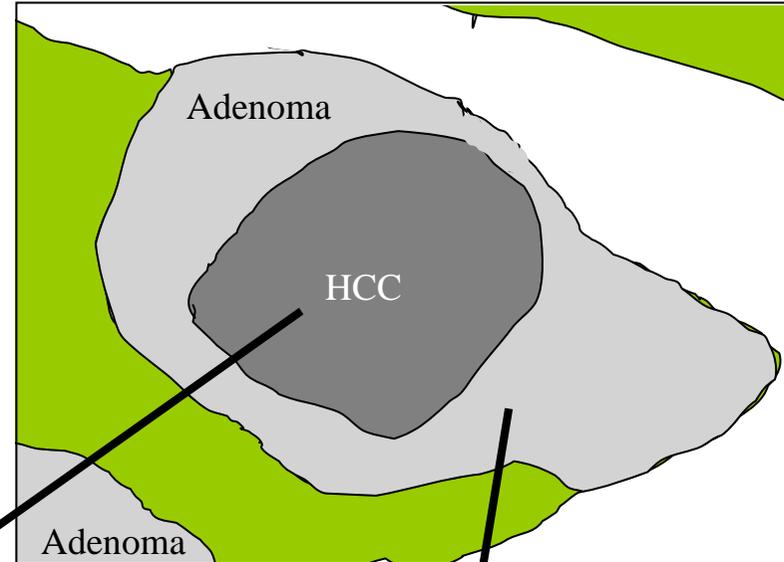

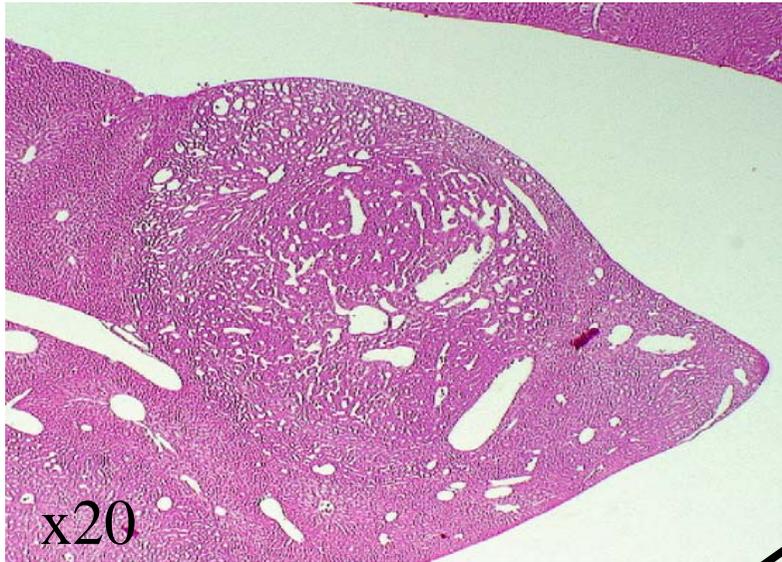

Adenoma

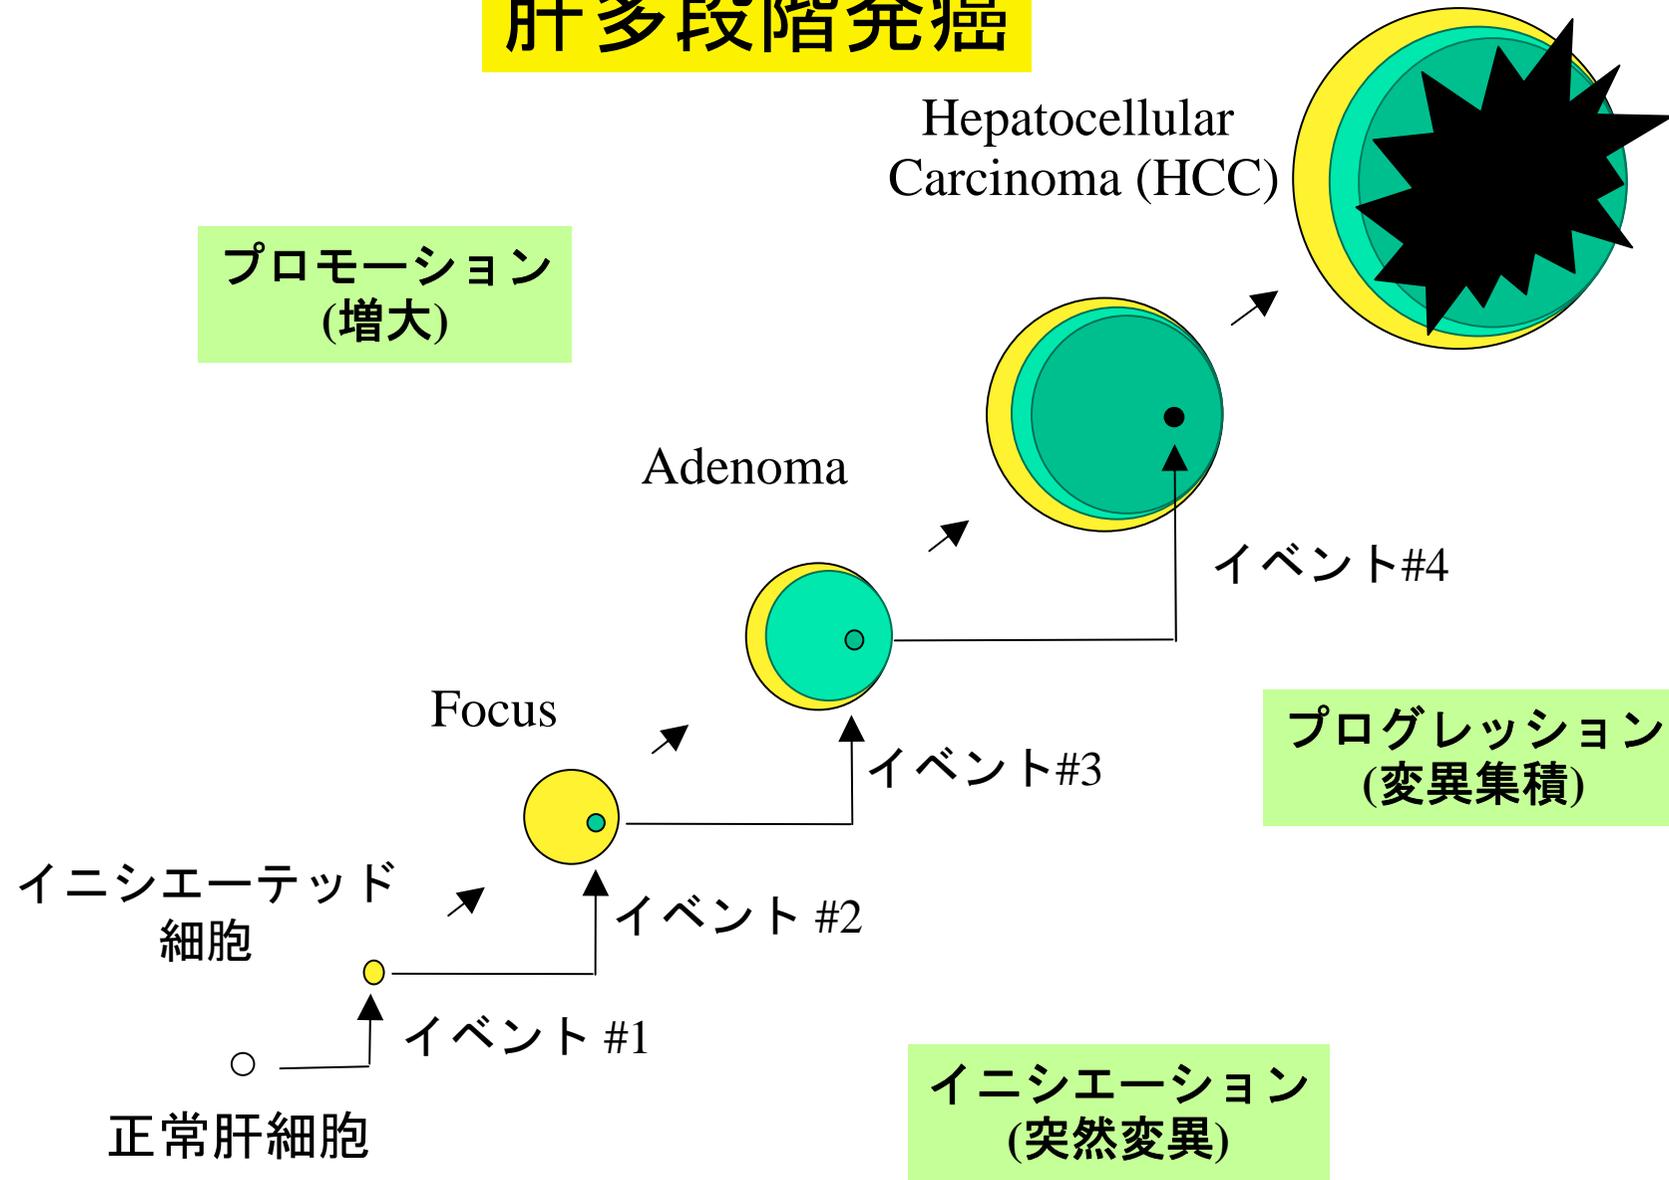

②肝発癌モデル

HCC in adenoma

## ②肝発癌モデル

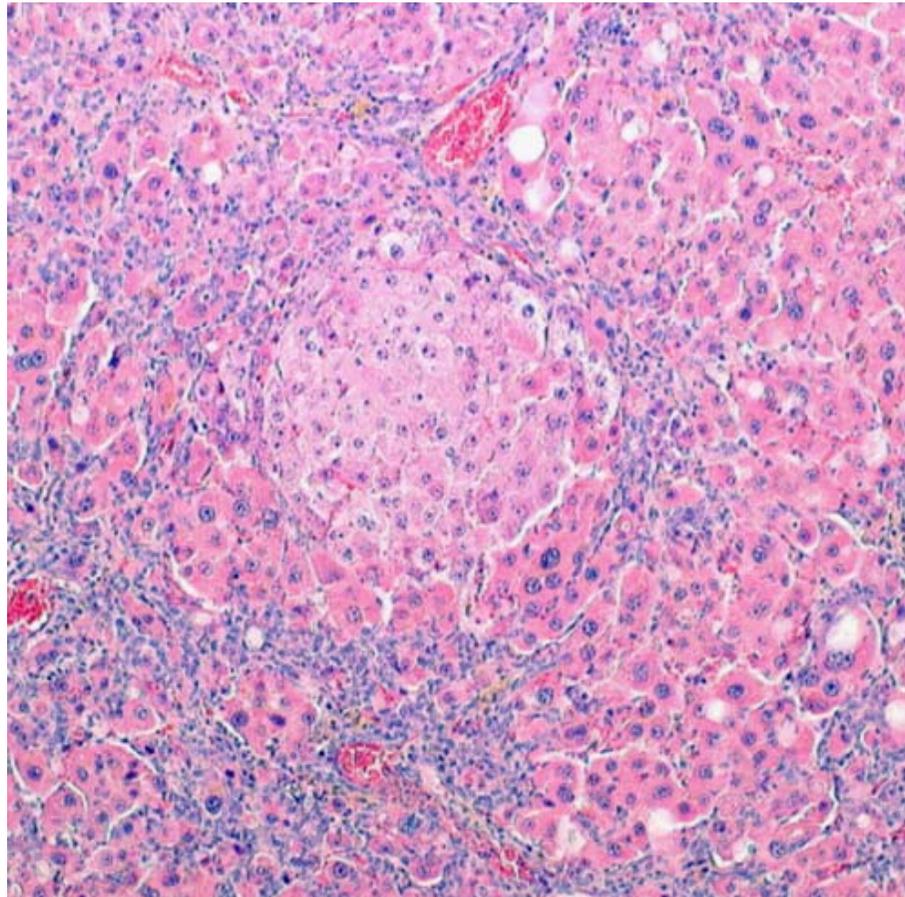

# 肝多段階発癌

## ②肝発癌モデル

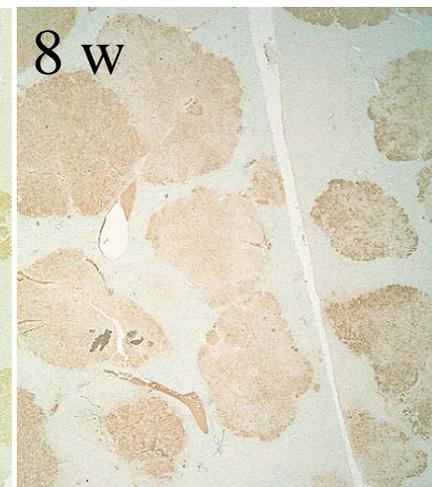

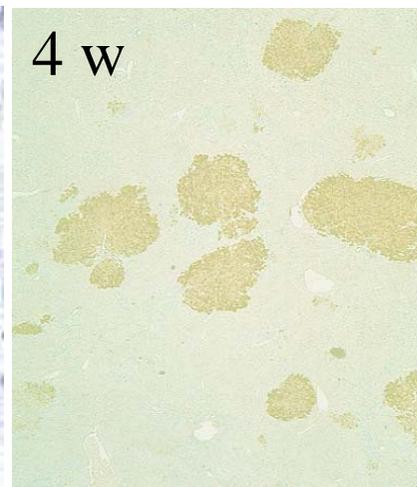

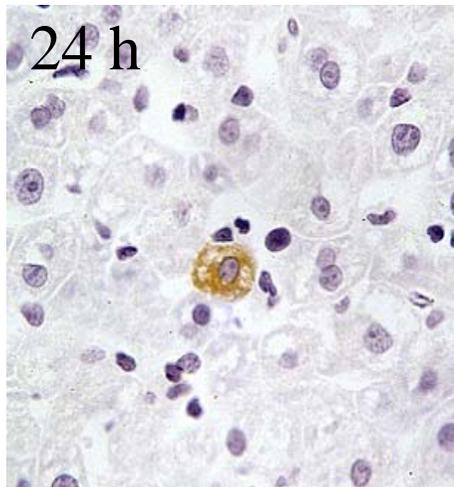

# 背景肝組織の障害

F344ラット／DEN + 2-AAF + PH

# 遺伝子発現の異常

GST-P (glutathione s-transferase, placental form)

## ②肝発癌モデル

# cDNA Array

## Under-expression

|  |   |
|--|---|
| cell surface antigens  | symporters & antiporters                              |
| gap junction membrane channel protein beta 1                               | gamma-aminobutyric acid (GABA-A) transporter 1        |
| gap junction membrane channel protein beta 2                               | nucleotide metabolism                                 |
| basic transcription factors, transcription activators or repressors        | phenylalanine hydroxylase                             |
| nuclear DNA-binding protein  | adenosine A2a receptor                                |
| stimulated by retinoic acid 14   | bcl family proteins, oncogenes & tumor suppressors    |
| hematopoietically expressed homeobox                                       | B-cell leukemia/lymphoma 2                            |
| amino-terminal enhancer of split   | other apoptosis-associated proteins                   |
| cAMP responsive element binding protein 1                                  | T-cell death associated gene                          |
| early growth response 1  | clusterin   |
| split hand/foot deleted gene 1   | growth factors, cytokines & chemokines                |
| POU domain, class 2, associating factor 1                                  | fibroblast growth factor 7                            |
| D site albumin promoter binding protein                                    | fibroblast growth factor 14                           |
| cell cycle -regulating kinases, intracellular kinase networkmembers        | insulin-like growth factor binding protein 4          |
| cyclin A1  | insulin-like growth factor 2                          |
| cyclin C   | insulin-like growth factor 1                          |
| Cyclin-dependent kinases regulatory subunit 2 (CKS-2)                      | fibroblast growth factor 7                            |
| other cell cycle proteins, intracellular transducers                       | hormones  |
| prothymosin alpha  | relaxin   |
| transducer of ErbB-2.1   | intracellular transducers, effectors & modulators     |
| extracellular transporters & carrier proteins                              | growth associated protein 43                          |
| lecithin cholesterol acyltransferase                                       | coagulation factor II (thrombin) receptor-like 3      |
| phospholipid transfer protein  | frizzled homolog 3 (Drosophila)                       |
| transthyretin  | frizzled homolog 7 (Drosophila)                       |
| neurofibromatosis 1  | intracellular transducers, effectors & modulators     |
| tumor susceptibility gene 101  | Eph receptor B3                                       |
| oncogenes & tumor suppressor genes   | syndecan 1  |
| SWI/SNF related, matrix associated, actin dependent regulator of chromatin | guanine nucleotide binding protein, alpha stimulating |
| Jun oncogene   | serine proteases                                      |
| insulin-like growth factor binding protein 2                               | plasminogen   |
| Harvey rat sarcoma oncogene, subgroup R                                    | serine protease inhibitor 1-2                         |
| heat shock protein, 86 kDa 1   | other enzymes involved in protein turnover            |
| heat shock 70kD protein 5 (glucose-regulated protein, 78kD)                | basigin   |
| genobiotic transporters, apoptosis-associated proteins                     | vitronectin   |
| glutathione S-transferase, alpha 2 (Yc2)                                   | intermediate filament proteins                        |
| GLUTATHIONE S-TRANSFERASE, MICROSOMAL (EC 2.5.1.18)                        | decorin   |
| ligand-gated ion channels  | functionally unknown                                  |
| cholinergic receptor, nicotinic, delta polypeptide                         | WSB-2 protein   |
|  | four and a half LIM domains 1                         |

## Over- expression

|   |
|---|
| basic transcription factors, transcription activators or repressors |
| eyes absent 2 homolog (Drosophila)                                  |
| spinal cord axial homeobox gene 1                                   |
| sine oculis-related homeobox 5 homolog (Drosophila)                 |
| forkhead box D4   |
| Kruppel-like factor 3 (basic)                                       |
| engrailed 2   |
| forkhead box F1a  |
| cell cycle -regulating kinases, intracellular kinase networkmembers |
| cyclin-dependent kinase inhibitor 1B (P27)                          |
| other cell cycle proteins, intracellular transducers                |
| cadherin 4  |
| integrin alpha 3  |
| extracellular transporters & carrier proteins                       |
| apolipoprotein E  |
| oncogenes & tumor suppressor genes                                  |
| v-abl Abelson murine leukemia oncogene 1                            |
| B-Raf proto-oncogene; serine/threonine-protein kinase (EC 2.7.1.-)  |
| expressed in non-metastatic cells 2, protein (NM23B)                |
| genobiotic transporters, apoptosis-associated proteins              |
| glutathione S-transferase, mu 2                                     |
| glutathione S-transferase, pi 2                                     |
| ligand-gated ion channels   |
| potassium channel, subfamily K, member 2                            |
| ribosomal proteins  |
| laminin receptor 1 (67kD, ribosomal protein SA)                     |
| other apoptosis-associated proteins                                 |
| clusterin   |
| Dynein light chain 1, cytoplasmic                                   |
| defender against cell death 1                                       |
| baculoviral IAP repeat-containing 4                                 |
| avian erythroblastosis oncogene B 2                                 |
| vesicle-associated membrane protein 1                               |
| galanin   |
| prepronociceptin  |
| growth factors, cytokines & chemokines                              |
| bone morphogenetic protein 8a                                       |
| insulin-like growth factor binding protein 6                        |
| ephrin B1   |
| insulin-like growth factor binding protein 1                        |
| intracellular transducers, effectors & modulators                   |
| Notch gene homolog 1, (Drosophila)                                  |
| suppressor of clear, C. elegans, homolog of                         |
| serine proteases  |
| plasminogen activator, urokinase                                    |
| protease inhibitors   |

## 遺伝子発現異常の特徴

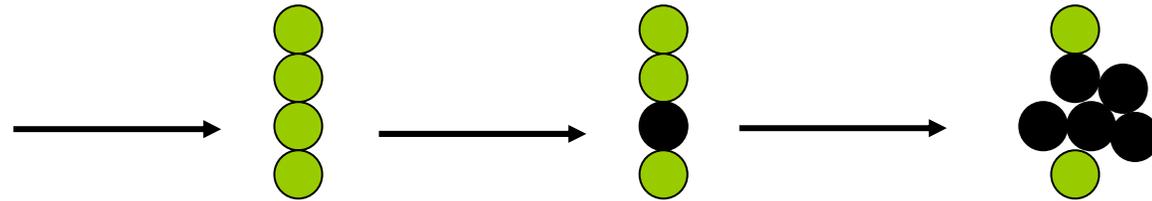

- 1) 比較的決まった遺伝子群  
増殖因子、薬物代謝酵素、エネルギー代謝、  
ストレス耐性、増殖サイクルなど
- 2) 個々の病変で比較的共通
- 3) 動物の種を超えた共通性
- 4) 初期変化から肝癌まで比較的共通

**Neodifferentiation!**

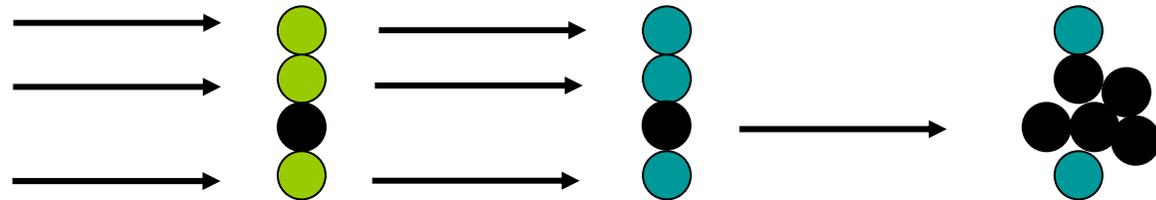

## ②肝発癌モデル

# 肝発癌の要因

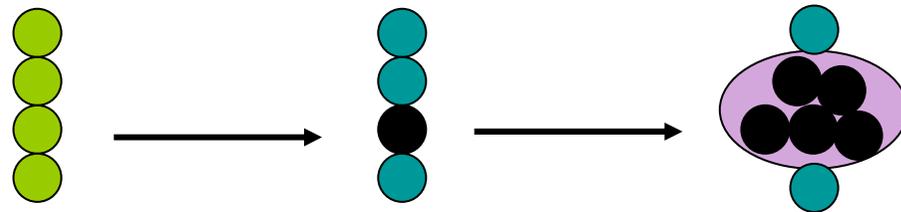

Transformation 高増殖、生存能

Selection 選択

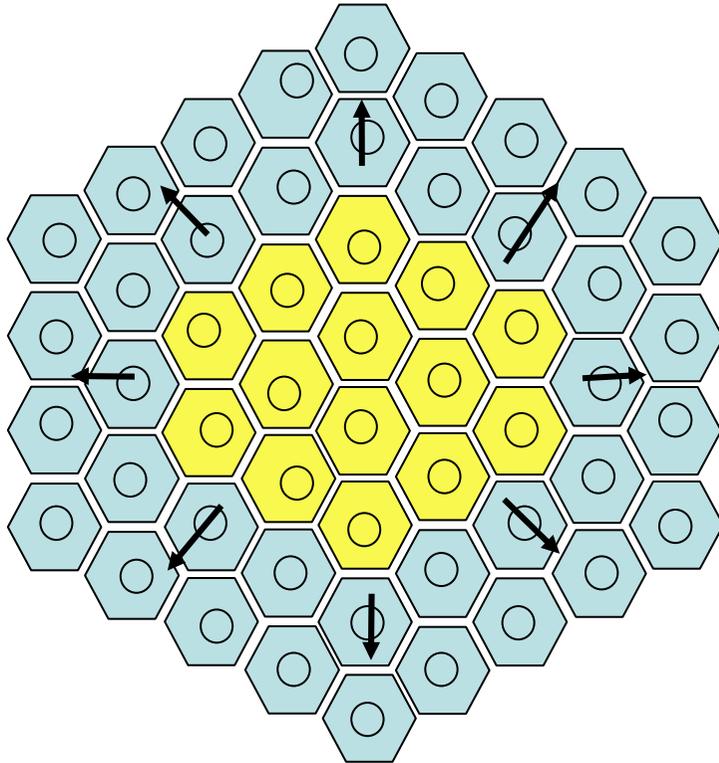

Isolation 微小環境

### ③肝発癌の要因

#### 1) Transformation

## Transformation

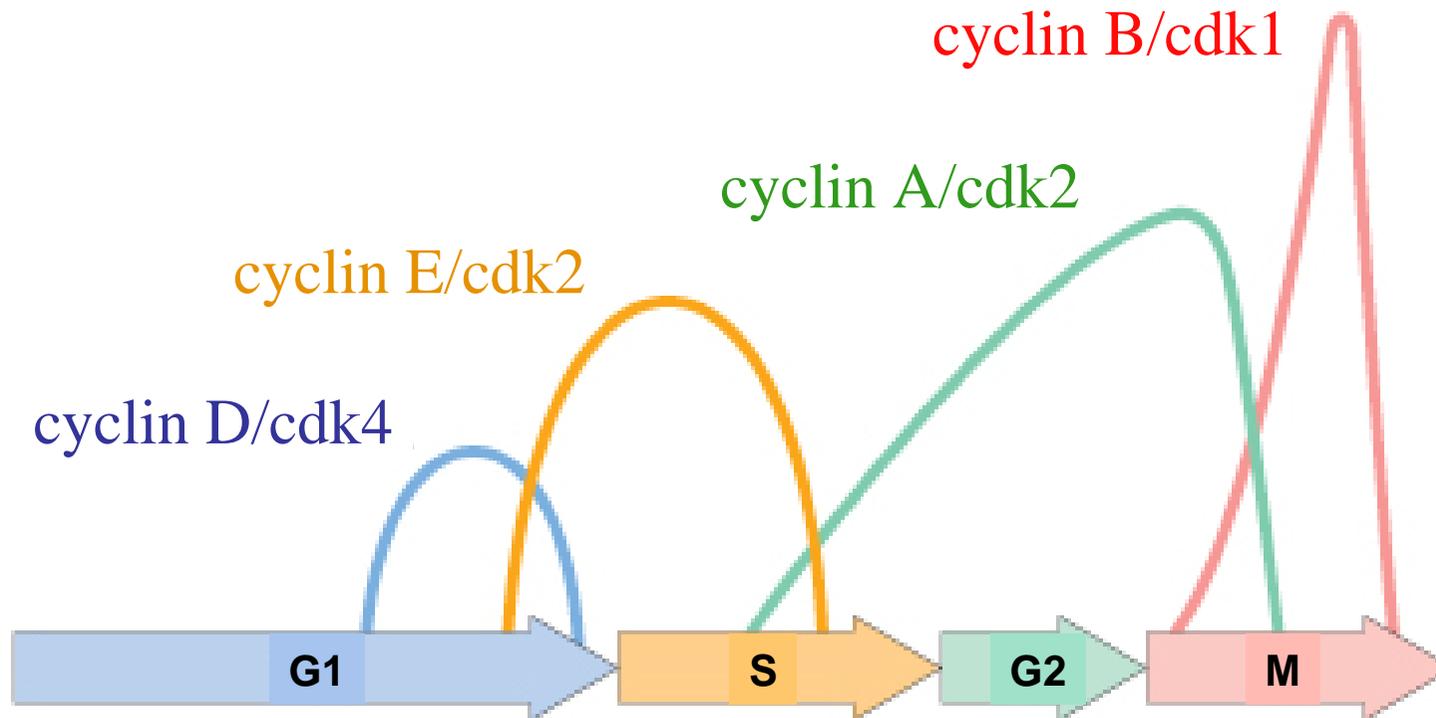

増殖、生存、抗アポトーシスなど

### 肝発癌関連遺伝子

- Oncogene activation  
(H-ras, c-Raf)
- Tumor suppressor inactivation  
(p53, Rb, p27, p21, p16)
- Wnt pathway activation  
( $\beta$ -catenin, E-cadherin)
- Cyclin activation  
(**cyclin D**, E, A)
- Growth factor activation  
(TGF- $\alpha$ , Igf-2)
- Transcription factors  
(HIF-1, FoxM, C/EBP $\alpha$ )

③肝発癌の要因  
1) Transformation

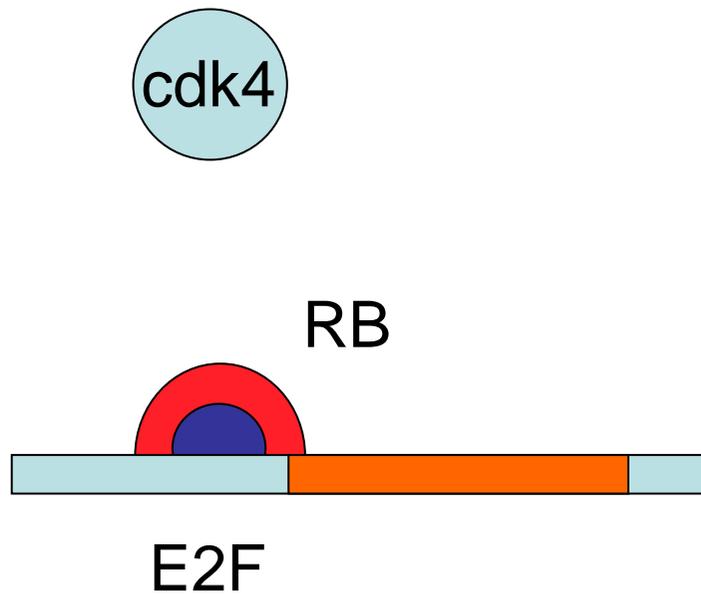

# 細胞周期とサイクリン

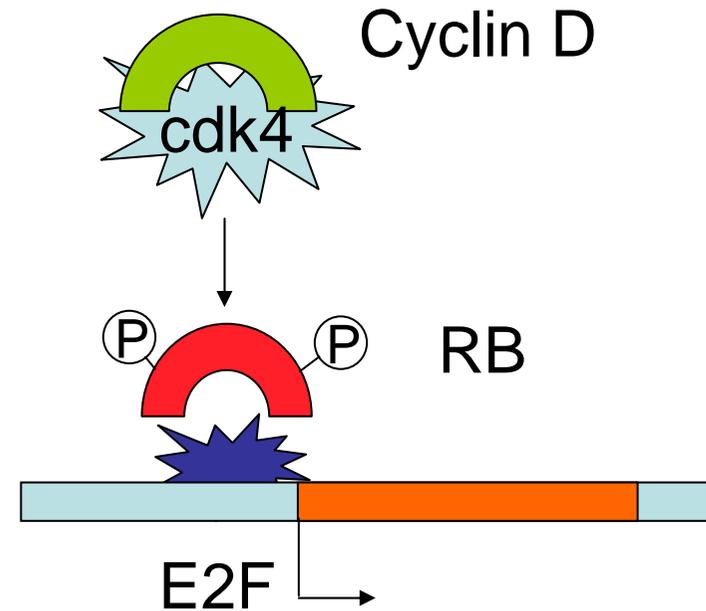

③肝発癌の要因  
1) Transformation

## Transformation 高増殖、生存能

## Selection 選択

## Isolation 微小環境

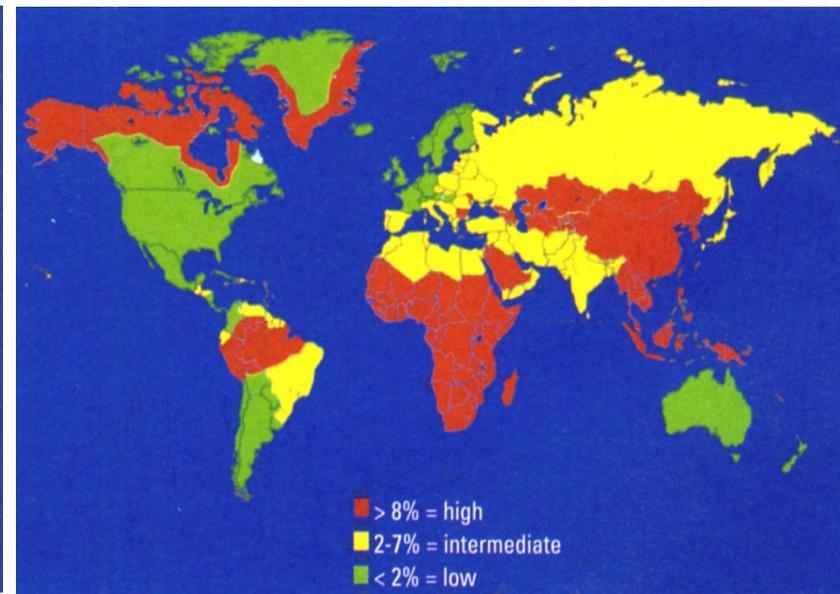

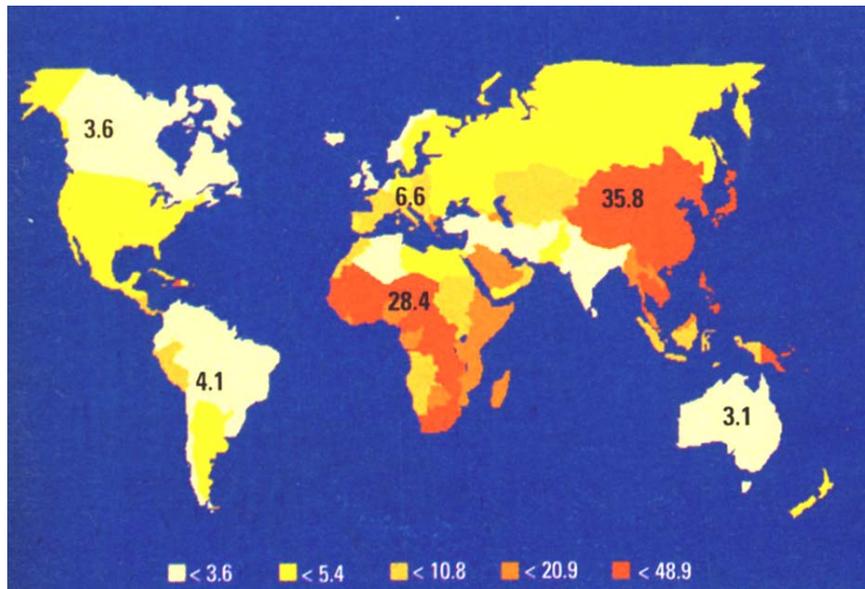

## ◎地理的分布

低開発国 > 先進国

高危険地域 > 20.1/10万人

サハラ以南アフリカ、東アジア、メラネシア

- HBV感染と相乗的影響

## ◎ Aflatoxin B1

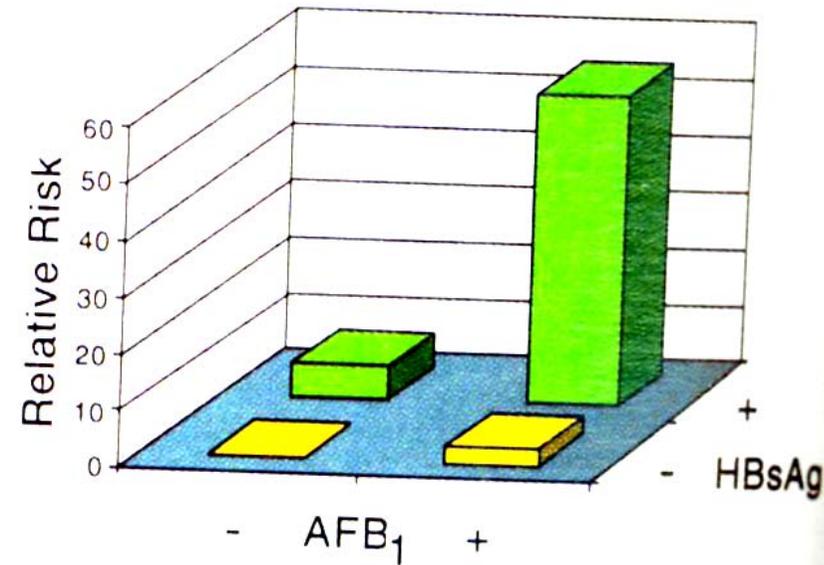

- カビの毒素

Aspergillus genus

- 実験動物にも強い肝発癌性
- 高温多湿一熱帯国

中国南部、サハラ以南アフリカ、東南アジア、メラネシア

- 穀物、ピーナツを汚染

## ◎人の肝がんの原因

- ・ アフリカ／東南アジア／中国  
B型肝炎ウイルス＋アフラトキシン
- ・ 日本／ヨーロッパ  
C型肝炎ウイルス＋アルコール

## ◎肝がんの予防

- ・ ワクチン：B型肝炎ウイルス（台湾、アフリカ）
- ・ 生活習慣：アルコール摂取、鉄摂取の制限

*It's just beginning!*
